

Boom Lift Attachment

Boom Lift Attachments - Boom lifts are machinery that has a platform which can be lowered or lifted to various heights, thus making this piece of equipment an important requirement in a wide variety of professions. Available in several specific varieties such as aerial hoists, scissor platform lifts, and knuckle boom lifts, each version functions very specifically.

Aerial hoists are most oftentimes utilized to transport people at skiing lodges who are not comfortable using a snowboard lift. These platform lifts function much like an elevator, snowboarders can be gradually moved up the mountain, stopping at stations along the path until they contact the top. Aerial platform lifts are also used in construction, transporting workers securely up and down the sides of multi-level building sites.

Scissor jacks are also in the boom jack category. They are used frequently by service companies as an idyllic system to permit workers to complete maintenance and repair on wires and cables that are attached to poles. Phone, cable television and power corporations have relied on the effectiveness of this kind of boom lift for years.

The knuckle boom lift is created for use within areas of bumpy terrain and where the need to change direction could be required. This type of boom lift has the ability to fit in tight spots where a scissor jack cannot fit. Working amid multiple machines in a production facility or in near proximity sandwiched between two walls, the knuckle boom additionally features a standard table equipped with rails for security and worker safety.

Based on the work requirements and the sort of work to be completed will ascertain the appropriate type of boom lift to choose. Fortunately, there is a model suitable for almost any purpose.
